

Exposure Control Plan Annual Review

By conducting an annual review, we will identify the need for changes in our exposure control plan, engineering controls and work practices. This annual review is also designed to identify advances in safer medical devices. Our thorough review may include an evaluation of the cause of past incidents, OSHA records, employee interviews, committee activities, literature review, etc.

In our yearly review, we evaluated the following changes in technology and implemented the following commercially available and effective safer medical devices for implementation.

Year/Changes

We solicited staff input from non-managerial employees responsible for direct patient care who are potentially exposed to injuries from contaminated sharps in the identification, evaluations, and selection of effective engineering and work practice controls:

Year/Description of how employees are involved

ECP Coordinator
Will ensure effective implementation of these recommendations
